SUMMARY

Enthusiastic and dedicated software engineer with a strong foundation in web development technologies and a solid understanding of core cloud computing concepts. Skilled in working with cloud services such as Amazon EC2, S3, VPC, and IAM. Passionate about building efficient, scalable server-side solutions and continuously improving technical skills while staying up to date with industry's best practices. Able to collaborate effectively in cross-functional teams, solve complex problems, and deliver high-quality, optimized code. Seeking opportunities to contribute to innovative projects and grow as a cloud-focused back-end engineer.

EXPERIENCE

Software Engineer | Nahr Development Software and Marketing Company — Remote

June 2024 – Present

- Developing and maintaining secure, scalable web applications using PHP and Laravel.
- Designing and optimizing database schemas for performance and scalability.
- Building efficient RESTful APIs and integrating advanced Laravel features.
- Applying clean architecture principles to ensure code is reusable, testable, and maintainable.

TECHNICAL SKILLS

Back-End: PHP, Laravel, MySQL, RESTful APIs, MVC, Queue Workers, Web Sockets, Cron Jobs, Payment Gateway Integration, Twilio, Wasabi, Firebase, CakePHP, CodeIgniter

Front-End: HTML, CSS, JavaScript, Bootstrap, Tailwind CSS, AJAX, Vue.js

Tools: Git, GitHub, Compose, Postman, Apache, RabbitMQ, TFS

EDUCATION

Bachelor of Computer Science

Higher Technological Institute, 10th of Ramadan City — 2023

COURSES & CERTIFICATIONS

- **CLS Learning Solutions** — PHP, OOP, Laravel, MySQL, RESTful API
- **Udemy** – Piotr Jura – PHP, OOP, Laravel, MySQL, RESTful API

PROJECTS

Qarar: A full-stack Laravel 12 healthcare booking platform with a multilingual (Arabic/English, RTL/LTR) admin dashboard and REST API powering mobile apps, built on Modular Architecture with Repository and Service Layer patterns. Dashboard: designed a dynamic Role & Permission system that auto-generates granular permissions (view/create/update/delete/toggle) per module, with a dedicated Super Admin bypass; built a Moderator role/module assigned per-committee (many-to-many) to manage and reply to committee chat conversations under its own permission scope; implemented a full Charity Committees system (request submission with document attachments, status tracking with audit logs, admin review notes/decisions) alongside Specialists, Bookings, Categories, Reviews, Transactions, and a broadcast "Send Notification" tool for admins, plus a custom animated 3D dashboard UI with dynamic icons. API: built REST endpoints (Laravel Passport auth) for specialist discovery/search/filtering, a booking system supporting video and voice consultation calls per specialist with server-side validation, automated booking reminders and auto-cancellation for past-due appointments, secure payments via MyFatoorah, real-time chat and live notifications through Laravel Reverb, and a full committee-request flow for end users. [Link](#)

Rawnq: Multi-Vendor Beauty Services Marketplace — built a comprehensive multi-tenant beauty services marketplace using Laravel (modular architecture with 35+ independent modules), Vue.js 3, MySQL, and AJAX, with an admin dashboard and RESTful APIs powering a customer mobile app and a beauty-center vendor app. Implemented a wallet system with transaction-safe balance handling, granular role-based permissions (super admin, sub-admin, vendor, branch manager) with menu-level access control, and multi-language/multi-currency support. Integrated real-time appointment scheduling with calendar-based booking, subscription plan management with usage limits and offline-payment approval workflows, and a performance dashboard displaying revenue analytics, platform commissions, and booking/earning metrics per vendor and branch. Built robust multi-branch booking management with rating/review tracking, dynamic content-approval workflows, and automated payment processing across multiple gateways (Stripe, PayPal, Razorpay, Kashier). [Link](#)

KUBA: Full-stack Laravel-based delivery company website with a fully dynamic Admin Dashboard driving all front-end content (Home, About, Services, Contact pages). Built 18+ CRUD modules using a modular architecture (Repository + Service Layer pattern). Implemented a bilingual (Arabic/English) content system with JSON-based translatable fields and script-validation rules, alongside a fine-grained role-based permission system with auto-generated per-action permissions. Added image/video upload handling, rich-text editing, AJAX search/pagination, and a real-time admin activity notification system for Super Admin oversight. [Link](#)

BOOK IRAQ: A full-stack Laravel 12 multi-service travel & tourism booking platform built on a Modular Architecture (35+ independent modules) with MySQL, Repository/Service Layer patterns, and Livewire for dynamic dashboard components. Supports Hotel, Flight, Car, Taxi, Tour, Boat, Property, Space, Visa, and Agency bookings under a unified multi-vendor marketplace. Dashboard: designed a dynamic Role & Permission system (core_role_permissions) enforced via a global dashboard_access middleware gate plus granular per-module permissions (view/create/update/delete); built a separate Vendor dashboard sharing the same auth guard (permission-based post-login redirection) with hotel/tour/car/taxi management, payouts, commission settings, booking/enquiry reports, and verification workflows; implemented a full user management module with OTP email verification, country-code/ISO validation at login, and CMS tools (multilingual pages with locale support, banners, news, media library). Automated Cron Jobs (MarkCompletedBookings, MarkUnpaidBookings) handle booking lifecycle status transitions. API: built REST endpoints (Laravel Passport auth) powering mobile/consumer apps for hotel/car/tour/taxi discovery, search/filtering, and booking, with OTP-based registration verification and secure multi-gateway payments (Stripe, PayPal, Paystack, Payrexx). Additional integrations: real-time chat (Chatify + Pusher), Socialite social login (Google/Apple), GeoIP-based location detection, iCal export/import for calendar sync, QR code generation, and Excel export for reports. [Link](#)

TRIMLY: Built using PHP 8.2 and Laravel 11 (modular architecture via nwidart/laravel-modules), with MySQL as the database and Redis (Predis) for caching/queues. Frontend admin dashboard built with Vue.js 3, Vue Router, JavaScript, jQuery, Bootstrap 5, and Sass, bundled through Laravel Mix, with Select2, DataTables, FullCalendar, ApexCharts/Chart.js, Flatpickr, Vue-Quill rich text editor, and Smooth Scrollbar for UI components. Authentication and authorization handled via Laravel Sanctum, Laravel Socialite, and Spatie Laravel-Permission, with Spatie Media Library for file uploads (backed by AWS S3 via League Flysystem), Spatie Activity Log for audit trails, Spatie Laravel-Backup for backups, and Spatie Webhook Client/Server for webhook handling. Payments integrated through Stripe, Razorpay, PayPal, and Kashier (via Guzzle HTTP). Real-time features and notifications powered by Firebase (Kreait Firebase PHP SDK) and Twilio SDK for SMS. Reporting and data handling done with Maatwebsite Excel, Yajra DataTables, Barryvdh DomPDF for PDF generation, and Mews Purifier for HTML sanitization. Livewire used for reactive components, Laravel Menu (lavary) for dynamic sidebar menus, and Doctrine DBAL for advanced migrations. Code quality maintained with PHP CS Fixer, Laravel Pint, and PHPUnit for testing, with Laravel Telescope and IDE Helper for debugging/development. [Link](#)

MoveNow: Ride-sharing and delivery platform (Laravel, MySQL, Bootstrap, AJAX) with RESTful API for User & Provider mobile apps, Stripe payments, wallet handling, real-time trip management via WebSockets, provider document verification, and Firebase push notifications. [Link](#)

Motah: A full-stack Laravel on-demand home services marketplace connecting users with workers/specialists for bookings across multiple service categories (services, sub-services, and custom services), built with a modular MVC architecture and MySQL. Implemented a complete ticket-based booking system (request → assignment → tracking → completion) with cancellation reasons, ratings, and a complaints-handling flow. Built a wallet and payment system supporting bank accounts, transfer transactions, and promo codes/discount types, alongside an admin dashboard using Yajra DataTables (server-side AJAX) for managing users, workers, zones/cities/nationalities, and settings. Added Twilio-powered in-app voice calls and real-time chat between users and workers, device-based push notifications, and a broadcast notification tool for admins. Used Laravel Passport for REST API authentication (separate User and Worker endpoints), Spatie Translatable for bilingual (Arabic/English) content, and Laravel Reverb for real-time features, with a rewards/loyalty system and banner management for the customer app. [Link](#)

Iplace24: Car maintenance platform (Laravel, MySQL, AJAX, Bootstrap) with a web admin dashboard and User/Vendor mobile apps — nearest service station discovery, car rental during repairs, remote key drop-off requests, and secure payment integration. [Link](#)

Nesba: Laravel and MySQL web application for managing educational courses and student enrollments, allowing admins to create/update/delete courses and track student enrollment records. [Link](#)

Wawan GYM: Gym management system (CakePHP, MySQL, AJAX) with a dashboard for subscriptions, memberships, coaches, branches, and activities, plus separate User and Coach apps offering customizable meal/workout plans with PDF export.

HYDRO: Full-stack corporate website (Laravel, MySQL, AJAX) for HydroMetal, an Egyptian aluminum manufacturer exporting to 40+ countries, with a custom Admin Dashboard, Repository Pattern architecture, multilingual (Arabic/English) content, and dynamic media management. [Link](#)
